The CW Arrow series has long been the standard-bearer of the DC television empire. Shows like Flash, Supergirl, and Legends of Tomorrow owe their existence to it, as Arrow was the show that kicked off the modern era of superhero television. Now in its fifth season, the argument can be made that there aren't many places left for Arrow to go at this point. Even so, DC Comics still has a lot of material to mine, and with the show recently returning to its season 1 roots, it's primed to launch new and interesting characters. This leads us to one question: Who will be the next characters to be extracted from the pages of the DC comics and featured on Arrow? 1. Talia al-Gul Lexa Doig and Talia al-Gul The Hollywood Reporter In comics Talia al-Gul is the favorite daughter of Ra al-Ghul, head of the League of Assassins. The character even appeared in Christopher Nolan's the Dark Knight Rises, played by Marion Cotillard. Talia will get a remake for the CW, with the network tagging Lexa Doig (Stargate SG-1) to play the character. In the comics, she is best known as Batman's opponent and frequent lover, eventually connecting with the Dark Knight to have a child. She will take on a slightly different role on Arrow, described by The Hollywood Reporter as mundane and cultural, and an elite warrior who does not choose a hand but creates his own. 2. Green Lantern Is It You, Hal Jordan? CW Back in 1970, DC Comics paired Green Lantern and Green Arrow in a concerted effort to balance the grittier aspects of the latter with a more law-abiding personality first. The swelling in popularity of the series inextricably linked the two heroes for years to come, leading to a partnership that became known in DC knowledge. Fast forward to the CW's expansive DC TV verse, and we still haven't seen that relationship being used to the fullest. That hasn't stopped Greg Berlanti and company from dancing around the potential appearance of Green Lantern for years. Season 4 premiere of Arrow features Oliver Queen and Amanda Waller bumping into a man dressed in a flight jacket named Jordan on the name Patch, referring to Hal Jordan. DC's most recognizable Green Lantern. Later, we see the advertising slogan of the Coast City, starting with the brightest day, and the darkest night ... that's what happened with the unveiling of the traditional Lantern Corps motto. Lightning even refers to a missing test pilot from a flight object, pointing once again in the direction of Hal Jordan. That's all being said, it's only a matter of time until the Green Lantern arrives at the scene. 3. Batman Green Arrow and Batman is where things get a little gloomy. On the one hand, even NOT FOX Gotham gets to have a fully formed version of The Dark Knight, and it's a series that deals entirely in the hero's hometown. Beyond that, it's hard to imagine DC casting a competing Batman for television, especially with Ben Affleck settling into a role for their But that doesn't mean it's completely out of scope, and there's some strong evidence to support that. First, the CW has already remake Man of Steel for Supergirl, and so far it has given us the best version of the character we got with Christopher Reeve. If they are willing to bring in a new Superman, this is the reason that Batman won't be far behind. Second, showrunner Mark Guggenheim himself noted that in the end it would be so cool to have Batman on the show. Thus, it will not completely rule out the possibility of a guest appearance sometime down the line. It probably won't happen anytime soon, but it won't be too many surprises to see the Dark Knight appear on Arrow after all. 4. Onomatopoeia Onomatopoeia DC Comics Onomatopoeia may not be a household name among casual fans, but he is an intriguing villain nonetheless. Created by Kevin Smith for the DC Comics in 2002, the aptly named super-villain is an expert shooter who is skilled in needlework. It is also known for saying comic book effects out loud. Initially, Arrow had planned to show it at the start of the show's run, but concerns about adapting the character for television led to them using various Baddie killers instead. Mr. Blank (J. August Richards) That's not to say Smith doesn't have his own designs to bring Onomatopoeia to life though. Speaking to Den Geek, he describes how instead of just making an actual sound, he would just have a little card. Business cards that have typewritten words of what F CK. So instead of him saying bham, you'd find this card on your desk and turn around and bham, it'd shoot at you and the like. What I think is a little more cold, you know, for this in live action . He's a terrifying villain. Get on it, CW. Follow Nick on Twitter @NickNorthwest Check Entertainment Cheat sheet on Facebook! Published October 13, 2020 Human history has no shortage of brilliant minds: writers, musicians, inventors, entrepreneurs and more. Not everyone chooses a creative career, but we could all use the power of creativity to live a brighter, more fulfilling and more successful life, rather than going through the same movements day in and day out. Is it possible to become more creative? The universal answer is difficult to give because there are different kinds of creativity. Do you want to know the least useful type?1. The least useful type of creativityIt's idea of creativity - good old to come up with new ideas. Surprised? There are methods to produce more and better ideas: idea buckets, brainstorming games, and the first principles of thinking. These are specialized creative instruments used by composers, writers and serial entrepreneurs, not so much the remaining 99% of the population. Do you still want this esoteric knowledge? Then go straight to the Masters: Josh Waitzkin, the U.S. junior champion and then world champion in martial arts Tai Chi Chuan, wrote a letter Autobiography. Gianni Rodari, an Italian children's book author known for his Cipollino adventures, outlined his approach to teaching fantasy in a real guide to the subject. Twyla Tharp, the famous American dancer and choreographer, wrote a book explaining her creative process. We'll get back to that book in a moment. What distinguishes creative people (besides their ideas)? Anyone can have interesting ideas- wouldn't it be nice to build a flying car, create a musical about South American tribes, cold email the French president, or ask to get a job as the next prime minister? Just like you, billions of people are also touched by beautiful sunsets and would like to double their income, but that doesn't automatically make all of them artists or entrepreneurs. Only those who have acted on their ideas or emotions and produced tangible results can be called creative. Mozart and Jane Austen became so famous for their results - symphonies and novels, which they, respectively, produced, and not because of their ideas. Creativity does not require so-called inspirationA the bound misconception is that masterpieces are created in moments of Eureka! - extraordinary bursts of creativity and otherworldly inspiration. The exclamation Eureka! refers to the apocryphal story of ancient Greek mathematician and inventor Archimedes, who took a bath and came across a solution to the complex problem he was thinking about. But keep in mind that Mozart has composed more than 600 pieces of music during his life, including 50 symphonies. It would take him thousands of moments of Eureka! to create such a staggering amount of world-class music, which is about one week of his short career. This is clearly absurd - extraordinary moments of inspiration are rare by definition. The famous choreographer Twyla Tharp believes that it was all hard work, no one worked more than Mozart. By the age of twenty-eight, his hands were deformed because of all the hours he spent practicing, performing and squeezing the pen to compose... As Mozart himself wrote to a friend: People are wrong, who think that my art easily comes to me. I assure you, dear friend, no one has devoted as much time and thought to composition as I have. Creativity can only be manifested during the creative process, whether it's trying a new dish in the kitchen, composing a new symphony, or figuring out how to help your child get into a good college. If you've never played a musical instrument, you're not going to suddenly produce a symphony after performing a creative exercise. This brings us to the most useful but underrated type of creativity:2. Kaizen: Finding ways to improve the processWhat would be a non-creative approach to any activity? He will do the same every day in the same way. So creativity will constantly change what you You're doing it. Sometimes this means adding complexity such as experimenting with gourmet meals for dinner to keep your family happy. In other cases, this means less complexity. When mass production was still in its infancy, Ford Motor Company engineers used a lot of creativity to speed up the process: A former employee, and he had to be a skilled worker, made a flywheel magnet from start to finish. A good worker can earn thirty-five or forty a day. Now, however, there was an assembly line for magnets. It was divided into twenty-nine different operations performed by twenty-nine different men. In the old system it took twenty minutes to make a magnet; now it took thirteen. Ironically, a few decades later Japanese car manufacturers ended up overcoming major American ones, including the Ford Motor Company itself. The approach that made this possible often translates as kaizen or endless gradual, continuous improvement. Kaizen type of creativity entails a constant improvement in your process: today you are researching a new dish to make for dinner, tomorrow you are trying to do it in less time, the next day you are trying different ingredients, the next day you discuss your recipe with others, the next day you take a class on the same recipe, the next day you are researching the nutritional ingredients of the properties. It's the mindset of an aspiring world-class chef and by adopting it, you'll become very creative in the kitchen really! 3. Transformational Type of Creativity: Change Your LifeY you can argue that it's all good for Mozart, Jane Austen, or Twyla Tharp to be creative because they were engaged in creative activities full time. How can creativity be found in ununsold work? How can you have a creative leisure time after work? The general advice is to work on our goals, but most of us have no clear goals, let alone a concrete plan of life telling us exactly how to use the time at our disposal. Honorable time answer: If you don't like something in your life, figure out how to change it. Goals or no goals, this is your life. Take responsibility for this because no one else will. It is here that transformational creativity comes into the picture. Transformational creativity is not decorating the walls of your cubicle with cute cat stickers to make the job bearable; it takes an evening course so that you can move on to a more enjoyable line of work. Transformational creativity is not throwing random ingredients into the pot hoping for a miracle; it's make friends with a gourmet chef who can teach you some serious kitchen magic. Transformational creativity does not try all the flavors of ice cream in the local salon; it makes up its own taste, or better yet, by opening his own shop Transformational creativity takes intellectual steps toward the life that you want and from life that you don't want. If Kaizen's creativity helps you move forward and continue to grow, grow, creativity will help you change course. How can you unleash your transformational creativity? Eliminate obstacles. The first hurdle is not knowing what you want in life. The solution is to set goals anyway. Success expert and best-selling author Brian Tracy recommends setting 10 goals for next year, but you can start with three: one financial goal, one relationship goal, one health goal: Your goals can be unrealistic, say, double your income, go on a date with a celebrity, or complete a marathon, all before the end of the year. It is ok. Eventually, you'll learn how to set goals that are motivating and suitable for you, but you have to start somewhere. The second hurdle doesn't want your goals bad enough. The solution is to act as if you did. You may decide to write a novel and not yet feel creative or committed because there are no strong emotions underlying this decision. It is ok. Just keep writing, rain, or shine. Your emotions will catch up with you later. Of course, if you can increase your level of motivation, by all means, do it! One budding entrepreneur unleashed creativity and eventually achieved great success after moving from cold and humid Chicago to sunny Phoenix, Arizona.Want to know the latest type of creativity? It's special in that it offers a shortcut to success. Mozart used it too! The fourth and final type is named after Dr. Watson, a colleague of the great detective, invented by Sir Arthur Conan Doyle4. Dr. Watson Type CreativitySherlock Holmes himself praised his friend and ally Dr. Watson for exhibiting this type of creativity: It may be that you are not yourself glowing, but you are a conductor of light. Some people who don't possess a genius have the remarkable power of stimulating it. I confess, my dear, that I am in your debt. Even if you are not particularly creative yourself, you may be able to do great things by collaborating with someone much more experienced and insightful. At the same time, a close relationship with an experienced master is one of the most famous ways to develop one of his own creativity - all its types. This association can take many forms: formal mentoring, what you pay for unstructured mentoring relationships combined with friendship or marriage Executive Assistant-type work that you are paid for apprenticeships while you are working on your mentor's projects without monetary compensation How can you convince the masters that you were their Dr. Watson? The most important quality of Dr. Watson is that he executes the ideas of Sherlock Holmes, sometimes even risking his own life in the process. Only immersed in the execution, he can come up with ideas that, even if they are wrong, manage to stimulate the powerful imagination of Holmes. The second equally important quality of Dr. Watson is that he takes a general approach, and mode of work set by Holmes, and did not question them, except for extreme extreme A little humility and exemplary work ethic go a long way, but you still have to ask for what you want. If you found a potential mentor online and were able to contact them, how could you phrase your request? Here are excerpts from messages sent to a potential mentor to a budding sub-dinin who actually worked: Nothing but an honor to be associated with you. Is there a way I can work with you, (doctor so-and-so)? That would be nothing more than an achievement. I don't need the money. Being connected to you is a dream I hope I can achieve. Is it possible for you to lay out some guidelines for me that, if I follow, I will get a job under you? I will follow all the guidelines and instructions you provide if you do. I can be your first student in city Y or country. I will follow all your instructions, guidelines. I want to be under your guidance. Please accept my offer. Believe in yourself. Napoleon Hill tells the startling story of Edwin Barnes, who wanted to be the business partner of the great inventor Thomas Edison, and he eventually did! He had no money or education; his only advantage was his burning desire combined with perseverance. Book Think and Get Rich is an absolute gem of informed conversations with some of the most successful entrepreneurs of the day, including Andrew Carnegie himself, with creative lessons sprinkled on every page! Parting with WordsThe power of creativity to change your life for the better is undeniable. Creativity of ideas is the most overrated type: if and until you specifically decide to become an artist, author of a book, inventor or something like that, it does not matter. The most practical type of creativity is Kaizen, finding ways to constantly improve the process. Specific tips can be found in countless books on the formation of the best habits, including 74 healthy habits of Leon Ho, which will dramatically improve every aspect of your life. As long as you have a process that you continue to improve from time to time, you are on the right track. Transformational creativity can change your life, although it requires courage, ingenuity and, above all, perseverance. Just keep making one little change at a time and your life will unfold like a work of art. Even if you don't feel any motivation what it is, that's fine. Creativity is a state of mind that can override your emotions. Perhaps the most empowering type is Dr. Watson's creativity, which entails aligning yourself with a master you can learn. Here the sky is the limit. but you have to give, sometimes a lot, to be able to benefit, as Dr. Watson did from his connection with Sherlock Holmes. Pick one type of creativity that you want to develop and discuss With a friend. And remember the words of the Chinese philosopher Lao Tzu: A Journey of a thousand miles begins with one step.
